

WebARGUS

WebARGUS is an advanced **Website Intrusion Detection and Response System (WIDRS)** developed to monitor, detect, and immediately respond to any unauthorized changes or attacks on websites. Our proprietary engine ensures that any malicious tampering is **automatically reversed within seconds** — ensuring continuous uptime, brand protection, and data integrity.

Key Features:

- **Real-time website monitoring**
- **Instant detection and reversal of attacks**
- **24/7 automated defense system**
- **Detailed security incident reporting**

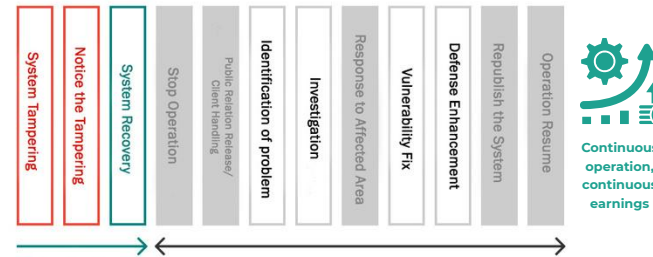

There are rising threats in the Philippine digital ecosystem. Cyber attacks like malware injection, hacking, web defacement, etc. are targeting local websites, and there is a lack of instant and fast recovery tools. Thus, it **often results to reputational and operational damages.**

With WebARGUS, web servers will be more secure with constant monitoring, tampering detection, and **auto-restoration of the affected files within 0.1 seconds.**

It takes an average of **241 days** to identify and contain the breach.
